### **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: claims 1-13 are allowed over the prior art of record because all of references of the record, viewed as closest prior art and considered alone or in combination, fails to suggest or fairly teach a compensation method for detecting the seeking speed of a pick-up head in an optical disk drive comprising a combination of all of following steps: converting a tracking error (TE) signal into a tracking error zero cross (TEZC) signal, averaging the pulse widths of a plurality of adjacent pulses on the TEZC signal to derive an average, and designating the average as the pulse width of a recovered TEZC signal, as recited in claim 1; a compensation method for detecting the seeking speed of a pick-up head in an optical disk drive comprising a combination of all of following steps: converting a TE signal into a TEZC signal, deriving a series of half-track seeking speeds from the TEZC signal, averaging a plurality of successive half-track seeking speeds to derive an average, and designating the average as a recovered half-track seeking speed, as recited in claim 8; or a compensation method for detecting the seeking speed of a pick-up head in an optical disk drive comprising a combination of all of following steps: converting an RF ripple signal into an RFZC signal, deriving a series of half-track seeking speeds from the RFZC signal, averaging a plurality of successive half-track seeking speeds to derive an average, and designating the average as a recovered half-track seeking speed, as recited in claim 11. Claims 1-7, 9, 10, 12 and 13 are allowed with their respective parent claim.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### CITED REFERENCES

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references relate to an optical apparatus having a detection unit for detecting a track zero crossing signal and a compensation unit for compensating the track zero crossing signal used to control a seeking/accessing operation of an optical head.
